VIT BHOPAL UNIVERSITY

PROJECT REPORT ON

“DIGITAL LITERACY”

NAME : ANUKREETI SINGH

REG. NO. : 25BCE11154

BRANCH : CSE - CORE

YEAR : 2025-2029

COURSE CODE: CSE0001

DATE : 31ST MARCH, 2026

INTRODUCTION

In today's digital world, having basic knowledge of technology is essential for students. Digital literacy refers to the ability to use digital tools effectively, communicate responsibly online, and stay safe while using the internet. It plays an important role in both academic learning and future career development.

This project was designed to help develop practical digital skills through a series of tasks. These tasks included creating an infographic, building a digital portfolio, exploring coding and collaboration platforms, practicing professional email writing, and understanding cybercrime awareness.

Through this project, I gained hands-on experience with various digital tools and platforms. It also helped me improve my communication skills, creativity, and awareness of online safety. Overall, this project has enhanced my understanding of how to use technology responsibly and effectively in real-life situations.

TASK 1 WRITE-UP

In this task, I created a digital infographic using Canva to present the concept of digital literacy in a simple and visually engaging way. The infographic includes important aspects such as the definition of digital literacy, commonly used digital tools, safe internet practices, maintaining a professional online presence, and basic email etiquette.

While designing the infographic, I focused on organizing the content clearly so that it is easy to understand for students. I used icons, short text, and proper spacing to make the design visually appealing and informative at the same time. I also selected appropriate colors and layout styles to make the infographic more attractive and readable. This helped in improving the overall presentation quality of the content. It also allowed me to better understand how visual elements enhance communication.

Overall, this activity improved my creativity and taught me how to present information in a structured and meaningful way using digital tools.

TASK 2 WRITE-UP

In this task, I created and updated my professional profiles on platforms such as GitHub, LinkedIn, Kaggle, and Stack Overflow. Each of these platforms plays an important role in building a strong digital presence. GitHub helps in showcasing projects and coding work, LinkedIn helps in creating a professional profile, connecting with others, and exploring career opportunities, Kaggle supports learning in data-related fields, and Stack Overflow helps in solving technical doubts.

I added relevant details such as my educational background, skills, and interests to these profiles to make them more complete and professional. I also ensured that my profiles are properly structured and present a clear overview of my abilities and interests. I also uploaded profile pictures and ensured that the information presented is clear and appropriate.

This task helped me understand the importance of maintaining an online identity and how it can create opportunities in the future. It also made me more confident in presenting myself professionally on digital platforms.

In the future, I plan to regularly update my profiles, share my work, and actively engage with these platforms to improve my skills and expand my professional network.

TASK 3 WRITE-UP

In this task, I explored both coding and collaboration platforms to understand their practical use. For coding practice, I used a platform such as HackerRank and CodeChef and solved a few beginner-level python and algorithmic problems. This helped me improve my logical thinking and understand how coding platforms work.

For collaboration, I created a Google Form titled "Digital Literacy Awareness Quiz" with multiple choice and short answer questions related to digital literacy concepts. I also viewed the responses in a spreadsheet format, which helped me understand how data can be collected and analyzed easily. I learned how to design questions effectively and interpret responses for better understanding.

This task was helpful in improving both my technical and collaborative skills. It showed me how different platforms can be used not only for learning but also for sharing knowledge and working with others effectively. It also increased my confidence in using online tools independently.

TASK 4 WRITE-UP

In this task, I focused on professional communication by writing two formal emails. One email was written to request an assignment deadline extension, and the other was to express interest in a summer internship opportunity. While writing these emails, I ensured that they followed proper structure, included clear subject lines, and maintained a polite and professional tone.

I also created a checklist of do’s and don’ts for responsible social media use. This helped me understand how online behavior can impact personal and professional reputation.

Overall, this task improved my communication skills and taught me the importance of clarity, politeness, and professionalism in digital interactions.

TASK 5 WRITE-UP

In this task, I explored cybercrime with a focus on UPI and online payment fraud. What surprised me the most was how easily people can be tricked into sharing sensitive information or approving fraudulent transactions. The real-life case study helped me understand how such scams happen in practical situations.

I also created a prevention checklist that highlights important safety measures such as not sharing OTPs, verifying payment requests, and avoiding suspicious links.

One important habit I will change is being more cautious while opening any link from unknown websites just for some information and will always verify the authenticity of the link/website. This task increased my awareness of cyber threats and the importance of staying alert while using digital platforms.

CONCLUSION

This project was a valuable learning experience that helped me develop essential digital literacy skills. Through the different tasks, I gained practical knowledge of using digital tools, creating content, and maintaining a professional online presence. I also improved my communication skills by learning how to write formal emails and interact responsibly online.

Additionally, the cybercrime awareness task helped me understand the importance of online safety and being cautious while using digital platforms. It made me more aware of real-world risks and how to avoid them.

Overall, this project increased my confidence in using technology effectively and responsibly, and it will be helpful for both my academic journey and future career.
